ABOUT SHADES OF BLUE

Captain Willie L. Daniels II, a 42-year veteran pilot and employee with United Airlines, founded SHADES OF BLUE in 1999. The organization provides a pathway for young aspiring pilots. It introduces youth, ages 14 - 30, to rewarding careers in all aspects of the aviation industry – pilots, engineers, flight attendants, ground crew, mechanics, etc. Daniels teamed up with a group of airline pilots, educators, and businesspeople to develop a solid curriculum that builds a foundation for a career in aviation and aerospace.

The SHADES OF BLUE leadership team has over 250 years of combined Aviation industry expertise. The organization has Southern California, Colorado, Washington D.C./Maryland, Georgia, and Illinois chapters. The chapters have worked with thousands of students nationwide through community/educational outreach and placed hundreds into the aviation and aerospace workforce.

In 2021, SHADES OF BLUE partnered with several organizations to create a comprehensive two-track program that included aerospace and robotics training. These organizations, such as Texas Instruments Porpoise Robotics and Colleges, are committed to getting students excited about collaborating and studying science, technology, engineering, art, mathematics, and design (STEAM d++) and dedicated engineering visual and performing arts, robotics, mathematics, design, computer languages, and world languages (STEAMD++).
